

Pneumatic pump for single-line systems PRA

PRA pump is a single-line pneumatic pump, used as a source of pressure lubricant in single-line central lubrication systems. The air is supplied via 3-way valve, the pump is equipped with a suction valve, check valve, safety valve and a filter 250/400 microns, optionally low-level control of the lubricant.

Note: The pump is also available in versions with ratio of 8: 1, the maximum pressure - 56 bar, the yield / cycle 2.7 cm³. Optionally, a low level control of the lubricant.
