

GHK scraper seal

GHK is a primary scraper dirt, suitable for both hydraulic equipment and pneumatic. Made of sturdy polyurethane Tecnolan. The main feature of the scraper is to prevent dust, liquids or other contaminants from entering through the stem to the internal sealing system, which could damage the cylinder.

Type	Pressure [bar]	Speed [m / s]	Temperature [° C]	Stuff	Resistance Media	Equivalent seals
GHK	-	-	-40 110	Polyurethane Tecnolan	mud, dust, oil, water, emulsions	K06, Z, AUASOB, CIS Economic Sciences, PW36, A42, AE42, MWM-P PWB
